

BLUENY™: Three Approaches to Sustainability

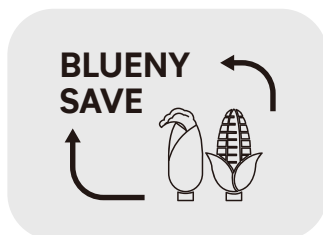

BLUENY™ consists of three series: BLUENY LOOP, BLUENY OCEAN, and BLUENY SAVE. BLUENY LOOP is a nylon made from recycled fiber waste, BLUENY OCEAN is post-consumer nylon derived from recovered fishing nets, and BLUENY SAVE is bio-nylon derived from plants. Although all three initiatives differ in terms of material and process, BLUENY™ creates sustainable value in nylon materials.

Extends across a wide variety of products

Addresses the increasingly serious problem of marine pollution

Uses plant-derived biomass raw materials
